

# STARLINE CLEANING INSTRUCTIONS

Cleaning and washing the gloves that used in the industry at regular intervals, provide significant savings. Gloves made of all materials may not be suitable for washing. Gloves made of yarns such as aramid and high quality leather have high costs. Correct cleaning of these products allows the glove to be used longer. There are different cleaning methods for each glove as stated below. It is not recommended to clean and wash the used damaged gloves. Each glove should be checked for damage before use.

## CLEANING LEATHER GLOVES

Leather gloves are generally not recommended to be washed. Water and soap removes the natural oils in the leather and causes the glove to harden. We recommend that all gloves made of leather be cleaned using a brush made of synthetic material. Cleaning should not be made of hard and predatory materials. It should never be washed by hand and in a washing machine.

We recommend that all gloves made of leather are cleaned with a brush made of synthetic material.

## CLEANING ARAMID YARN GLOVES

Aramid is resistant to cuts and high temperatures due to its natural structure. Gloves made by knitting or weaving with aramid yarn will last for a long time under the correct usage conditions. It is recommended that the care and cleaning of these gloves should be washed in water not exceeding 40 °C for 10 minutes and then rinsed with cold water.

It can be washed with ordinary soap or detergent. It is recommended to wash in water not exceeding 40 °C and then rinse with cold water.
